EXP – 3

Aim: To design a flowchart in Figma depicting the operation of the Network Switching Subsystem (NSS) in a mobile cellular system.

Algorithm:

1. Start the process.
2. The mobile station requests a connection.
3. BTS and BSC forward the request to MSC.
4. MSC verifies the subscriber using HLR, VLR, and AuC.
5. If valid, establish the call; otherwise, reject the request.
6. End the process.

Output:

Result: The flowchart representing the operation of the Network Switching Subsystem was successfully designed in Figma.
